

A heatmap visualization of a 2D grid, likely representing a spatial distribution of data. The grid is composed of small squares, each colored according to its value. The color scale ranges from dark purple (low values) to yellow (high values). A prominent horizontal band of higher values (yellow and light green) stretches across the middle of the grid. Below this band, there is a smaller, localized cluster of higher values (yellow and light green) in the lower right quadrant. The rest of the grid is predominantly dark purple, indicating low values. The overall pattern suggests a concentration of high values along a central horizontal axis and a secondary, smaller concentration in the lower right area.
